Cure: Ask if they can point you to your house.

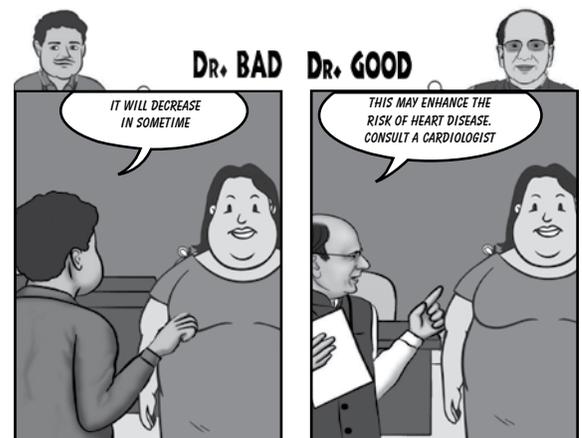

Symptom: The room is shaking a lot, everyone is dressed in white and the music is very repetitive.

Cause: You're in an ambulance.

Cure: Don't move. Let the professionals do their job!!!!

## Dr. Good and Dr. Bad

**SITUATION:** An obese woman presented with high values of pulse wave velocity after her pregnancy and delivery which was complicated by gestational diabetes mellitus (GDM).

**LESSON:** According to a hospital-based cohort study, pulse wave velocity values are considerably higher after GDM in comparison with normoglycemic pregnancies. In addition, rise in this value is also associated with upregulation of prolonged TIMP-1. Moreover, it was found that cardiovascular risk factors were more prevalent in females with higher BMI in contrast to those with a history of GDM.
